

## **How the Corporate Media Misleads Us, Intentionally**

by Stephen Elliott-Buckley - Wednesday, October 29, 2014

<https://politicsrespun.org/2014/10/how-the-corporate-media-misleads-us-intentionally/>

So, here's Forbes magazine telling us that the majority of scientists are skeptical about global warming.

Hmmm. Well that's news, for sure.

Except it's a lie.

As a phrase, I'd be somewhat more interested in "climate change" or "climate breakdown," but that's not all that significant compared to the MASSIVE LIE IN THEIR HEADLINE! <echo> <echo> <echo>: "*Peer-Reviewed Survey Finds Majority Of Scientists Skeptical Of Global Warming Crisis*".

Here's what they don't tell us:

The survey was of petroleum industry scientists and engineers.

Do you think there MAY be some bias here?

They even [link to the study](#), but they don't report the most important element that erodes most of its credibility: their horribly skewed sample. And if you can find any Forbes apology or retraction or clarification about this lying piece of spin, I'd love to see it, because I can't find it.

Ladies and gentlemen, submitted for your approval, our friends, the corporate media:

<cue applause sign>

### **Peer-Reviewed Survey Finds Majority Of Scientists Skeptical Of Global Warming Crisis**

It is becoming clear that not only do many scientists dispute the asserted global warming crisis, but these skeptical scientists may indeed form a scientific consensus.
